

Software Developer - Backend

Job description

About the company:

Maximl is an enterprise SaaS company building a connected worker platform for the deskless workforce, solving the problem of standard work implementation for the 500M strong frontline workforce in manufacturing and process industries. We are a technology start-up backed by Nexus VP and Axilor Ventures, with a goal to digitally transform last-mile value chains and generate insights related to human work to drive productivity, safety, and quality.

We are present across India, LATAM, Europe and SEA with Fortune 500 customers across Oil & Gas, Chemicals, Steel, CPG, and Industrial Engineering.

You can learn more about us at www.maximl.com

About the role:

Python/Django Developer at an exciting startup. We are technologists by background and are providing intelligent solutions for complex industrial operations. You will be part of core engineering team responsible for delivering highly scalable solutions for industries.

Responsibilities:

- Develop, maintain, improve, and optimize backend infrastructure.
- Implement scalable REST APIs that are used by our internal team and customers.
- Work closely with the Azure DevOps to integrate and deploy the code to the cloud.
- Build and design data schemas for storing and retrieving information for the web platform
- Implement and enforce software development lifecycle best practices including CI/CD and API testing.
- Provide strategic and operational oversight for Enterprise software product development

Required Qualifications:

- Strong at basic mathematics, analysis and algorithms
- Experience with Django/Python, optimizing SQL queries, and profiling of code for performance.
- Experience in working with a task queue (eg. Celery)
- Experience with leveraging technologies throughout the stack for caching to attain scalability
- Experience with working with any one cloud provider (AWS / Azure)
- Familiarity with working with a web server (Nginx etc), Redis
- Strong Familiarity in microservice architecture, REST API and CRUD Design
- Strong verbal and written communication skills. Candidate must be able to demonstrate their experience with code documentation and understanding of frameworks to describe software architecture such as C4 diagrams
- Ability to work with remote teams
