Software Developer - Frontend

Job description

About the company:

Maximl is an enterprise SaaS company building a connected worker platform for the deskless workforce, solving the problem of standard work implementation for the 500M strong frontline workforce in manufacturing and process industries. We are a technology start-up backed by Nexus VP and Axilor Ventures, with a goal to digitally transform last-mile value chains and generate insights related to human work to drive productivity, safety, and quality.

We are present across India, LATAM, Europe and SEA with Fortune 500 customers across Oil & Gas, Chemicals, Steel, CPG, and Industrial Engineering.

You can learn more about us at www.maximl.com

About the role:

We are looking for an Angular10 Developer responsible for the client side of our service. Your primary focus will be to implement a complete user interface in the form of a mobile and desktop web app, with a focus on performance. Your main duties will include creating modules and components and coupling them together into a functional app. The artistic design will be delivered to you, together with a few HTML templates, CSS, and final HTML output. You will work in a team with the back-end developer, and communicate with the API using standard methods. A thorough understanding of all of the components of our platform and infrastructure is required.

Responsibilities:

- Delivering a complete front end application
- Ensuring high performance on mobile and desktop
- Writing tested, idiomatic, and documented JavaScript, HTML and CSS
- Coordinating the workflow between the graphic designer, the HTML coder, and yourself
- Cooperating with the back-end developer in the process of building the RESTful API
- Communicating with external web services

Required Qualifications:

- Proficiency with JavaScript and HTML5
- Professional, precise communication skills
- Deep knowledge of Angular2+ practices and commonly used modules based on extensive work experience
- Creating self-contained, reusable, and testable modules and components
- Ensuring a clear dependency chain, regarding the app logic as well as the file system
- Thorough understanding of the responsibilities of the platform, database, API, caching layer, proxies, and other web services used in the system
- Validating user actions on the client side and providing responsive feedback

Software Developer - Frontend

Job description

- Writing non-blocking code, and resorting to advanced techniques such as multi-threading, when needed
- Creating custom, general use modules and components which extend the elements and modules of core Angular2+
- Experience with building the infrastructure for serving the front-end app and assets
- Architecting and automating the build process for production, using task runners or scripts
- Creating configuration, build, and test scripts for Continuous Integration environments
- Strong verbal and written communication skills. Candidate must be able to demonstrate their experience with code documentation and understanding of frameworks to describe software architecture such as C4 diagrams
- Ability to work with remote teams
- Expertise with Git

Joining Date: Immediate | Remote work for the next 12 months

Compensation: 15,000 Pm stipend
